Section 1 The Problem

Homicide Zero, led by Chad Frerer, is a US-based company dedicated to preventing adolescent homicidal threats by providing tools for screening, assessing, and guiding interventions. Serving counselors, psychiatric professionals, law enforcement, and community members, Homicide Zero equips users with actionable resources to identify and manage risks related to youth violence. As the company anticipates rapid growth, it faces operational challenges in managing incoming inquiries:

- **Manual Call Handling:** Answering inquiries about Homicide Zero's tools and intervention guidance is time-consuming, diverting staff from critical tasks like refining assessments or supporting providers.
- **Scalability Constraints:** With expected growth, manually handling calls is unsustainable, risking delayed responses and missed opportunities to engage stakeholders.
- **Emergency Situations:** Incoming calls may involve urgent situations requiring immediate redirection to emergency services, which the current process lacks.
- **Inconsistent Information Delivery:** Without automation, ensuring consistent, accurate information about screening tools and intervention strategies for diverse audiences (e.g., counselors, community members) is challenging.
- **CRM Integration Gaps:** Customer data from calls is not seamlessly logged into Monday.com, hindering efficient follow-up and stakeholder management.
- **Limited Availability:** Inquiries outside business hours go unanswered, reducing accessibility for providers and community members seeking urgent guidance.

Section 2 The Solution

Qwickstep.ai proposes an AI-powered inbound Voice Agent system to address Homicide Zero's challenges and support its mission of preventing adolescent homicidal threats:

- **Automating Information Delivery:** The voice agent will provide accurate, consistent answers to questions about Homicide Zero's screening tools and intervention guidance, freeing staff for high-value tasks.
- **Handling Emergencies:** The system will detect urgent situations using keyword triggers, deliver a clear disclaimer to call 911, and transfer calls to live agents when needed.
- **Seamless CRM Integration:** Call details and qualification data will be logged into Monday.com, streamlining stakeholder management and follow-up.
- **Enabling Scalability:** The automated system supports growth by handling high call volumes without additional staffing, ensuring accessibility for providers and community members.
- **Professional, Mission-Aligned Communication:** Using natural US-English, the voice agent will maintain an empathetic, professional tone suited to the sensitivities of Homicide Zero's audience.

This solution will enhance accessibility, streamline operations, and align with Homicide Zero's goal of early detection and prevention of youth violence.

Section 3 Scope of Work

Qwickstep.ai will develop an inbound AI Voice Agent system for Homicide Zero, integrated with Monday.com, to handle inquiries efficiently and support the company's mission of preventing adolescent homicidal threats. The system will include:

Inbound AI Voice Agent System

- Inbound call handling capability, using natural US-English voice tailored to Homicide Zero's audience of counselors, psychiatric professionals, law enforcement, and community members.
- Emergency detection logic to identify urgent situations (e.g., via keywords like "emergency" or "urgent"), delivering a disclaimer: "In case of an emergency, please hang up and call 911 immediately," and transferring to a live agent if needed.
- Personalized scripting, including:
 - Greeting and confirming the caller's identity.
 - Answering FAQs such as "How does Homicide Zero's platform help prevent youth violence?" "What screening tools are available?" "How can community members access intervention guidance?" and "What are the steps for using assessment tools?" etc.
 - Collecting qualification details (e.g., caller's role, organization type, specific needs).
 - Offering callback options or live agent transfers for complex or sensitive inquiries.
- Access to a knowledge base containing up-to-date information about Homicide Zero's screening tools, assessment processes, and intervention strategies, provided by the client during development.
- Voicemail detection and callback logic to log and schedule follow-up calls based on predefined workflows.
- Data logging into Monday.com, capturing call outcomes (e.g., answered, voicemail, transferred), qualification details, and next steps for efficient stakeholder management.
- Integration with n8n for automated workflows, ensuring seamless data flow between the voice agent and Monday.com.

Documentation and Handover

Upon completion, we will deliver:

- A **detailed documentation** walkthrough explaining how to manage both systems day-to-day.

- **Recorded video walkthroughs** providing detailed explanations of the systems, workflows, and how to operate, manage, and make changes to them independently. These videos will serve as long-term training resources for you and your team.
- A **handover session** to ensure the your team is fully equipped to run and optimize the solution post-launch.

Section 4 Timeline

Our proposed timeline is pragmatic and takes into account past experience designing and building similar systems. Each phase is carefully planned to ensure a smooth, efficient rollout with high attention to quality.

Task	Duration
System Design & Voice Agent Configuration	~3 business days
n8n Workflow Setup & Monday.com Integration	~4 business days
Conversation Flow Development & Testing	~2 business days
Documentation & Training Videos	~1 business days

Total Duration: 10 business days
Expected Start Date: 1 day(s) after the deposit payment is received

We always strive to deliver projects ahead of schedule, and this timeline allows us to deliver a robust, fully tested solution while leaving room for feedback and refinement during each stage.

Section 5 Infrastructure Cost

Qwickstep.ai will build and configure the Inbound AI Voice Agent using the specified tech stack as shown below. Following project completion, Homicide Zero will be solely responsible for all ongoing costs associated with the system, including:

Service/Tool	Purpose	Monthly Cost (\$USD)
Vapi	AI Voice Agent	~\$0.12/min
n8n	Automation & Workflow	\$25/month
OpenAI API	AI Processing (Large Language Models)	~\$10

Qwickstep.ai is not liable for any increases in third-party service costs or changes to their pricing models post-delivery. If any third-party platform experiences disruptions or goes offline, we are not obligated to provide refunds or compensation for system downtime.

*Prices are approximate and may vary based on usage, provider rates, and exchange rates.

Section 6 Related Systems

In addition to the solution proposed in this engagement, we also offer the following high-performance AI Voice Agent systems:

- **Speed-to-Lead Voice Agent (Outbound)**
 - Instantly calls new leads within 60 seconds of form submission
 - Asks qualifying questions and books appointments in real time
 - Fully integrated with CRM and calendar systems
 - Operates 24/7 to maximize lead response and conversion
- **Appointment Reminder AI Voice Agent (Outbound)**
 - Calls leads automatically before scheduled appointments
 - Confirms attendance, offers rescheduling options, and syncs with your calendar
 - Reduces no-shows through personalized and timely reminders
 - Supports multiple workflows (e.g., viewings, open houses, consultations)

These systems are designed to enhance responsiveness, increase operational efficiency, and capture more value from every interaction.

Section 7 Your Investment

This is a two-step package with a 50% deposit and the remaining balance due on delivery. “Delivery” is defined as the fulfilment of the scope conditions above, and your payment is only due upon full satisfaction with the project.

Name	Price	QTY	Subtotal
Inbound AI Voice Agent System	\$800	1	\$800

Total Investment: \$800 USD

50% Deposit (Due at Signing): \$400 USD

50% Upon Delivery: \$400 USD

Payments can be made via Bank Transfer or PayPal. If the final payment is not received after project delivery, we reserve the right to disable the system until full payment is made.

Maintenance Services (Post-Delivery):

- \$75 USD/hour for workloads under 30 hours/month.
- \$65 USD/hour for workloads exceeding 30 hours/month.

Section 8 Terms and Conditions

This agreement between Qwickstep.ai and Homicide Zero, represented by Chad Frerer, governs the development and delivery of the inbound AI Voice Agent system detailed in this proposal.

Qwickstep.ai agrees to deliver a fully functional AI Voice Agent integrated with Monday.com, including personalized workflows, emergency detection, and training materials (documentation and video walkthrough). Homicide Zero agrees to provide timely access credentials, FAQ content, and feedback during development. Delays in these items may affect the timeline.

The total investment is \$800, split into two payments of \$400: one due upfront to initiate development, and one upon successful delivery.

Post-delivery support includes a 30-day period for bug fixes and minor adjustments at **no additional cost**. Additional support or updates will be billed at \$75 USD/hour for workloads under 30 hours/month, or \$65 USD/hour for workloads exceeding 30 hours/month.

Homicide Zero retains full ownership of all data, including call logs and metadata, and full administrative access to the system. A complete copy of all scripts and configuration documents will be provided upon completion. The system can be operated, migrated, or modified independently without dependency on Qwickstep.ai.

Qwickstep.ai's role is solely as a developer tasked with building the AI Voice Agent system according to Homicide Zero's specifications. Qwickstep.ai will strictly adhere to the scripts, qualification questions, knowledge base, fallback requests, and objection-handling protocols provided by Homicide Zero. As of 2025, AI voice agents, while highly advanced, may in rare cases experience hallucination, potentially leading to unintended statements. Qwickstep.ai commits to developing the system to the best of its ability, ensuring it follows Homicide Zero's provided content and requirements. Homicide Zero will have full ownership and control of the voice agent post-delivery, including its operation and any modifications.

Given the sensitive nature of Homicide Zero's work in preventing adolescent homicidal threats and addressing mental health issues, Qwickstep.ai explicitly states that it bears no responsibility for any adverse outcomes, including but not limited to incidents related to suicide or homicide, resulting from the use of the voice agent. Homicide Zero acknowledges that Qwickstep.ai's liability is limited to the development and delivery of the system as specified, and Homicide Zero assumes full responsibility for the system's performance, content, and any legal or ethical implications arising from its use. Qwickstep.ai shall not be subject to any claims, lawsuits, or damages related to such incidents. Homicide Zero shall indemnify Qwickstep.ai for any claims, lawsuits and or loss and or damages that Qwickstep.ai may sustain howsoever and whensoever arises in connection with the use of the voice agent.

If Homicide Zero cancels the project after work begins, the initial deposit is non-refundable. Future feature additions or scope expansions will require a separate agreement.

By signing below, both parties acknowledge and agree to the terms of this agreement.
