Section 1 The Problem

Heather Warden is launching a startup focused on providing AI voice agents for HVAC clients, beginning with a critical demo to showcase the technology's potential to prospective customers. Currently, the absence of an automated inbound voice agent for demonstration purposes poses significant hurdles that threaten the business's early success and growth trajectory. Key challenges include:

- **Missed Opportunities:** Without an AI-driven demo system, prospective HVAC clients may not fully experience the capabilities of the voice agent, leading to lost interest and slower adoption. This is especially critical as HVAC businesses often need immediate, tangible proof of how AI can handle customer interactions efficiently.
- **Manual Effort:** Demonstrating the solution manually or without a realistic simulation consumes valuable time that could be better allocated to client acquisition, partnership building, and refining the startup's service offerings. This inefficiency hampers Heather's ability to focus on strategic growth as the business scales, diverting resources from core innovation efforts.
- **Inconsistent Experience:** The lack of automation in demos introduces variability in how the technology is presented, where manual explanations might miss critical details or fail to convey a polished, professional interaction. For a startup aiming to establish credibility in the competitive HVAC sector, this inconsistency could deter potential clients and undermine the brand's reputation early on.
- **Scalability Limitations:** As the business grows and attracts more prospects, relying on manual demos will quickly become unsustainable. The current setup lacks the infrastructure to handle multiple demonstrations efficiently, potentially causing bottlenecks that could stall momentum, frustrate early adopters, and hinder the ability to meet market demand.
- **Limited Demonstrations:** Without a dedicated demo voice agent, sales representatives face challenges in effectively showcasing the solution's value to prospective HVAC clients. A lack of an interactive, realistic proof-of-concept hinders trust-building, slows the sales cycle, and makes it difficult to convert prospects into committed clients, a critical barrier for a new venture seeking to gain traction.

Without an automated inbound demo solution, Heather Warden cannot fully capitalize on demonstration opportunities to showcase lead qualification and customer handling. This gap limits the startup's ability to scale efficiently, secure a strong client base in the HVAC industry, and establish a competitive edge in the AI automation market, potentially stunting its long-term growth potential.

Section 2 The Solution

Qwickstep.ai proposes the development of a customized inbound AI Voice Agent designed as a demo tool to simulate interactions for a fictional HVAC company (e.g., Reliant HVAC). This agent will allow prospective clients to call in and experience the system as if they were an HVAC customer (lead). This standalone demo agent will provide a realistic simulation without any real integrations or actions, ending each workflow with a demo closure message.

Key Capabilities of the Inbound Demo AI Voice Agent:

- **Language Detection and Bilingual Support:** Automatically detect the caller's language (English or Spanish) and respond accordingly, ensuring a seamless experience for diverse prospects and demonstrating the agent's versatility in handling multilingual interactions.
- **Contact Information Collection:** Gather simulated contact details (e.g., name, phone, address) from the caller, showcasing how the agent can efficiently capture lead information in a real scenario.
- **Lead Qualification:** Ask targeted, simple questions to qualify the caller's HVAC needs (e.g., issue type, urgency, property details), adapting the conversation flow based on responses to illustrate dynamic qualification pathways.
- **Simulated Appointment Booking:** Offer options to "book" an appointment, but without actual scheduling—instead, confirm details and transition to the demo end, highlighting how real bookings would work.
- **Simulated Transfer Options:** Provide choices to "transfer" to a technician or support, simulating escalation without any real handover, to demonstrate handling of complex queries.
- **Knowledge-Driven Responses:** Leverage a flexible knowledge base trained on HVAC-specific scripts, FAQs, and company details for the fictional Reliant HVAC, allowing the agent to answer questions and provide insights during the demo.
- **Demo Closure:** At the end of any chosen workflow, politely conclude with a message like "End of Demo—Thank you for trying our AI Voice Agent," ensuring prospects understand it's a simulation.

By implementing this Inbound Demo AI Voice Agent, Heather Warden can provide an interactive, engaging proof-of-concept to prospects, efficiently showcasing the technology's potential without real-world commitments. This solution not only addresses current demonstration challenges but also positions the startup as a forward-thinking leader in AI-driven HVAC services, ready to meet the demands of a growing client base and compete effectively in a dynamic market.

Section 3 Scope of Work

Qwickstep.ai will design and deploy a fully functional inbound AI Voice Agent as a standalone demo tool for Heather Warden's sales presentations, utilizing Retell.ai, n8n, OpenAI, and Twilio.

AI Voice Agent System

The system will include the following components:

- **Custom Workflow Design:**
 - Develop bilingual conversational scripts (English/Spanish) for a fictional HVAC company like Reliant HVAC, with flexible question sets to be finalized with Heather.
 - Configure natural-sounding voices in both languages with appropriate tone and pacing to reflect a professional yet approachable style.
 - Implement language detection, fallback responses for unexpected inputs, and adaptive call flows to ensure smooth handling.
- **Call Behavior Customization:**
 - Handle inbound calls to a dedicated demo number, greeting callers with a personalized introduction as Reliant HVAC's AI assistant.
 - Collect simulated contact information, ask qualifying questions (to be defined), and branch into pathways for booking or transfer simulations.
 - Include retry logic for unclear responses and options to simulate rescheduling or escalation without actual actions.
- **Post-Call Automations:**
 - No real reminders or data storage; instead, end each interaction with a customizable demo closure message (e.g., "End of Demo").
 - Generate optional in-call summaries or logs for demo purposes.
- **Knowledge Base Setup:**
 - Train the agent on provided HVAC-specific scripts, FAQs, and details for the fictional company, enabling it to answer questions and qualify leads effectively during the demo.

Documentation and Handover

Upon completion, we will deliver:

- A **detailed documentation** walkthrough explaining how to manage both systems day-to-day.

- **Recorded video walkthroughs** providing detailed explanations of the systems, workflows, and how to operate, manage, and make changes to them independently. These videos will serve as long-term training resources for you and your team.
- A **handover session** to ensure the your team is fully equipped to run and optimize the solution post-launch.

Section 4 Timeline

Our proposed timeline is pragmatic and takes into account past experience designing and building similar systems. Each phase is carefully planned to ensure a smooth, efficient rollout with high attention to quality.

Task	Duration
System Design & Voice Agent Configuration	~2 business days
n8n Workflow Setup & GHL Integration	~5 business days
Conversation Flow Development & Testing	~4 business days
Documentation & Training Videos	~1 business days

Total Duration: 12 business days

Expected Start Date: Upon kickoff call

We always strive to deliver projects ahead of schedule, and this timeline allows us to deliver a robust, fully tested solution while leaving room for feedback and refinement during each stage.

Section 5 Infrastructure Cost

Qwickstep.ai will build and configure the AI Voice Agent using the specified tech stack as shown below. Following project completion, Heather Warden will be solely responsible for all ongoing costs associated with the system, including:

Service/Tool	Purpose	Monthly Cost (\$USD)
Retell	AI Voice Agent	~\$0.10/min
Twilio	Messaging	\$0.014/min
n8n	Automation & Workflow	\$24/month
OpenAI API	AI Processing (Large Language Models)	~\$5

Qwickstep.ai is not liable for any increases in third-party service costs or changes to their pricing models post-delivery. If any third-party platform experiences disruptions or goes offline, we are not obligated to provide refunds or compensation for system downtime.

*Prices are approximate and may vary based on usage, provider rates, and exchange rates.

Section 6 Related Systems

In addition to the solution proposed in this engagement, we also offer the following high-performance AI Voice Agent systems:

- **Speed-to-Lead Voice Agent (Outbound)**
 - Instantly calls new leads within 60 seconds of form submission
 - Asks qualifying questions and books appointments in real time
 - Fully integrated with CRM and calendar systems
 - Operates 24/7 to maximize lead response and conversion
- **Appointment Reminder AI Voice Agent (Outbound)**
 - Calls leads automatically before scheduled appointments
 - Confirms attendance, offers rescheduling options, and syncs with your calendar
 - Reduces no-shows through personalized and timely reminders
 - Supports multiple workflows (e.g., viewings, open houses, consultations)
- **Dead Lead Reactivation Voice Agent (Outbound)**
 - Contacts and re-qualifies leads from the past 6–12 months
 - Uses custom scripts to re-engage cold or inactive prospects
 - Routes reactivated leads to your inbox or calendar
 - Includes CRM tagging, conversion tracking, and iterative script refinement
- **Intelligent General AI Voice Agent (Inbound)**
 - Answers all inbound calls 24/7, even after hours or on weekends
 - Handles FAQs, provides listing information, and books viewings
 - Can escalate to a live human when necessary
 - Fully integrated with your CRM and calendar for seamless support

These systems are designed to enhance responsiveness, increase operational efficiency, and capture more value from every interaction.

Section 7 Your Investment

This is a two-step package with a 50% deposit and the remaining balance due on delivery. “Delivery” is defined as the fulfilment of the scope conditions above, and your payment is only due upon full satisfaction with the project.

Name	Price	QTY	Subtotal
Inbound AI Voice Agent for HVAC Customer Interactions	\$1,170	1	\$1,170

Total Investment: \$1,170 USD

50% Deposit (Due at Signing): \$585 USD

50% Upon Delivery: \$585 USD

Payments can be made via Bank Transfer or PayPal. If the final payment is not received after project delivery, we reserve the right to disable the system until full payment is made.

Section 8 Terms and Conditions

This agreement between Qwickstep.ai and Heather Warden governs the development of the inbound AI Voice Agent for demonstration purposes, with Qwickstep.ai committed to delivering a fully functional demo system utilizing Retell.ai, n8n, OpenAI, and Twilio, including custom bilingual (English/Spanish) conversational scripts, language detection, simulated lead qualification, appointment booking, and transfer options, along with a knowledge base trained on HVAC-specific scripts and FAQs for a fictional company (Reliant HVAC). The deliverables include comprehensive documentation, recorded video walkthroughs, and a handover session to ensure Heather Warden's team can independently operate and manage the system post-launch.

Heather Warden is responsible for providing timely feedback, content for the knowledge base (e.g., HVAC-specific scripts, FAQs, or company details), and maintaining active accounts with sufficient credits for third-party services (Retell.ai, Twilio, n8n, OpenAI) to ensure ongoing operation. Delays in providing required materials or feedback may impact the project timeline.

The total investment for this project is \$1,170 USD, with a 50% deposit of \$585 USD due upon signing and the remaining \$585 USD payable upon delivery, with payment due only upon Heather Warden's full satisfaction with the project. If the final payment is not received post-delivery, Qwickstep.ai reserves the right to temporarily disable the system until payment is resolved. Should cancellation occur after work has begun, the deposit will be forfeited. Requests for additional features or modifications beyond the agreed scope will require a separate agreement and additional costs to be negotiated.

Upon delivery, ownership and access to all generated demo data (e.g., call logs, in-call summaries) will be fully transferred to Heather Warden, granting her team complete control to operate the system independently. Qwickstep.ai is not responsible for the use, misuse, or compliance with applicable laws (e.g., TCPA or data privacy regulations) related to the demo system, and Heather Warden must ensure legal compliance, including obtaining necessary consents for any real-world use beyond the demo.

Post-delivery support includes a **14-day period** for bug fixes and minor adjustments at **no additional cost**. Ongoing maintenance is available at \$75 USD per hour for workloads under 30 hours per month, or \$65 USD per hour for workloads exceeding 30 hours per month, providing flexible support as Heather Warden's needs evolve.

By signing below, both parties acknowledge and agree to the terms set forth in this Agreement.
